

## Century Concrete Railroad Pedestrian Crossings Provide Safe Walking Surface in Industrial Applications

Century Group Inc. provided its precast concrete railroad grade crossing panels to an industrial plant located in Sulphur, Louisiana. The concrete crossing panels were installed in the facility's rail spur with a gauge panel traversing an adjacent ditch providing a stable and level walkway. The Century pedestrian crossing panels featured an elastomeric rubber flangeway filler and a non-skid walking surface. Once the pedestrian crossing was installed the perimeter of the crossing was painted with safety yellow paint to enhance visibility.

Century's Special Projects Coordinator – Chris Gaudet commented, "The installation of our concrete pedestrian crossing went

well and we are pleased to be a part of this project which enhances safety for personnel who must traverse the railroad tracks during daily operations. Century Group was able to cast a lagless crossing panel that was used to bridge over the ditch adjacent to the pedestrian crossing providing a safe walking surface for security and operations personnel."

For more information on Century Groups Inc.'s precast concrete pedestrian railroad grade crossing or railroad spill containment pans email the Century Group Railroad Products Division or call 1-800-527-5232, Ext. 118.

## Century Group Delivered HDPE Spill Containment System to Memphis, Tennessee

Century Group manufactured and delivered its HDPE railcar spill containment pans to a food manufacturing facility in the

*Railroad secondary containment food processing facility.*

Memphis, Tennessee area. The Century HDPE railroad spill pans assisted this manufacturer in complying with the EPA SPCC regulations at their rail car loading / unloading area. The project featured 120 track feet of containment where the processing facility loaded and unloaded railcars handling liquid food products. As the industry leader in the design and manufacture of high quality, compliant railcar spill collection

pans, Century Group offers a wide variety of designs which can be customized to meet the specific needs of your railroad spill containment project.
