

Century Group Inc. Innovative Railroad Spill Collection Systems

When managing an industrial facility where railcars and locomotives are loaded, unloaded, washed or refueled, industry is facing with the possibility of experiencing leaks or spills which can be hazardous to the environment, dangerous to employees and damaging to the rail siding. With an extensive background in spill prevention and containment of lost product, the **Century Group Inc.** offers the **Enviropan®**, a state-of-the-art railroad spill collection system that helps industry meet their railroad spill containment goals and be good stewards of the environment.

“We can help your people design the very best spill prevention system, one that will work and meet or exceed all regulatory agency expectations.” Chris Gaudet said, “We can lend support to your engineering staffs and/or assist with the design of the entire system.”

The Century Group offers the **HDPE Enviropan®** which is the most cost-effective railroad spill collection system on the market today. The Century Group can assist their clients in the design and cost analysis of furnishing a railroad spill collection system for virtually any type of product including, petroleum products, acids, sludge, plastics and agricultural products.

The Century Enviropan® will hold up to the most aggressive substances that would normally be destructive to steel systems. The high-density polyethylene has proven to be highly effective in collecting organic chemicals, acids, alkalis and salts. Century Group has supplied many systems to new fuel ethanol and Biodiesel facilities which are being constructed across the U. S. For more information contact railroad@centurygrp.com, 1-800-527-5232 Ext. 118 or visit www.centurygrp.com.
