

# Century Offers Precast Concrete Corporate Signs To The Fuel Ethanol & BioDiesel Industry

By Century Group Inc.

Corporations have recognized the urgent need for alternative fuels to lessen our dependency on hydrocarbons and have taken the initiative to build fuel ethanol facilities across the U. S. Your company and employees should be proud of your accomplishments and what better way to let the public know who operates the facility they drive past everyday than to place a first class state-of-the-art precast concrete sign at the entrance as a

true monument to this great accomplishment.

When it comes to strength, dependability, longevity and aesthetics Century precast concrete corporate signs are the obvious choice. Century Group Inc. can manufacture and deliver a precast concrete corporate sign that is vandal proof, won't rot or rust and can withstand winds up to 140 miles per hour. We supply a free standing concrete sign F.O.B. your plant. All you have to do is set the sign on two poured-in-place concrete piers and grout at the anchor blockouts and its done!

We make it easy. Provide Century with your logo, name of facility and preferential color scheme and we can deliver.

We then incorporate your name and graphic logos into a conceptual drawing for review including color scheme, dimensions and on-site foundation work required. Once your design team and/or owner approves the drawings we go to work.

1. The concrete is 5000 p.s.i. – 28 days steel reinforced with American grade 60 reinforcement.
2. The sign is coated with a textured cementitious colored coating that is manufactured safely for coloring concrete.
3. The sign is manufactured using a free standing design so that it can easily be loaded, shipped and unloaded.
4. When the sign reaches your facility all you have to do is lift the sign using a forklift or small truck crane and place it on the poured-in-place anchor piers. Once the sign is set on the piers you fill the anchor blockouts with grout, touch up the area with the color concrete coating supplied by Century and you have a world class corporate sign.

As the leading supplier of railroad spill collection systems for the fuel ethanol industry it makes perfect sense to deliver two products on the same truck to save money. Our technical sales team can provide you with a turnkey package to provide a first class concrete sign from conception to actual delivery to your fuel ethanol facility.
